Subject Index

absolute analysis 277
accreditation 523
accuracy 457
activation analysis 379
adsorbates 309, 427
aflatoxin 59
analysis 63
analytical chemistry 167, 545, 550, 555
analytical electron microscopy 405
analytical techniques 29
ashing 445
atomic spectroscopy 245
atomic structure 177
atom probe 401
automated analysis 39
automated spectral interpretation 505

bio-field-effect transistor (BioFET) 363
bioluminescence 157
biosensors 129
biotechnology 167
block copolymers 225
brine analysis 39

carbon dioxide 337
carriers of information 177
characterization of solid-state polymers 215
charge-remote fragmentation 325
chemical hazards 391
chemical sensor 363
chemiluminescence 157
chemiluminous immunoassays 157
chemometrics 93, 550
chiral recognition 113
classification 93
clinical applications 157
clinical chemistry 129, 145
computer aided spectra interpretation 483
conducting polymers 237
constructions 177
contaminant monitoring 167
correctness 457
crystal structure 177
cyclosporine A 135

decomposition 445
decomposition mechanism 299
depth profiling 415
detection 71
digestion 445
digital image processing 515
direct mixture analysis 325

education 545, 550, 555
electrical field probes 177
electron energy loss spectroscopy 405
electron probe techniques 177
electrothermal atomization 299
elemental analysis 287
enantioseparation 113
ESR 71
examination methods 245
expert systems 483, 493
extended X-ray absorption fine structure (EXAFS) 435

fatigue 177
field-ion microscopy 401
figs 59
food irradiation 71
food of animal origin 63
fractionation 225
furnace atomization 277
fuzzy set 93

gas field-effect transistor (GasFET) 363
gen technology 129
glass 255
glassy carbon 177
glycated hemoglobins 135
graphical analysis 467
graphite 177

heterogeneous kinetics 391
heterostructures 309
high performance liquid chromatography (HPLC) 39, 135, 493
hydrocarbons 13

image processing 245, 415
imaging 515
inductively coupled plasma-atomic emission spectroscopy 265
industrial needs 545
infrared (IR) spectroscopy 309
infrared spectrum interpretation 505
intercomparison exercises 523
interferences 287
ion microscopy 515
ion probe techniques 177
ion-selective field-effect transistor (ISFET) 363
isotope dilution 145
isotopic methods 81

laboratory automation 483
laser-induced fluorescence 277
life time 177
liquid chromatography 113
liquid crystal (LC) polymers 225
low and high energy collision induced dissociation 325
low-temperature gasification of nitrates 299

marine aerosols 13
mass spectrometry 145, 287, 299
mass spectrometry of polymers 215
mechanism of sensor operation 363
medieval artifact 255
membrane-oxide semiconductor field-effect transistor (MOSFET) 363
membrane-oxide semiconductor field-effect transistor reference electrode (RefFET) 363
method development 493
method validation 493
microanalysis 401, 415
microelectrodes 353
microelectronics 177
microstructure 177, 225, 401
microwave 445
mixed integer programming 93
mobile phase 337
modifiers 337
multivariate methods 467

neural network 505
nuclear reaction analysis (NRA) 255
nuclear spectroscopy 245

origin inference 81
oviposition-deterring pheromone 325

PAHs 13
partial least squares 93
pharmaceutical industry 103
photon probe techniques 177
photopolymerization 391
physico-chemical forms 29
plasma source 287
polybithiophene 237
polyethylene 225
preconcentration 445
prediction 467
process control 167
process monitoring 39
product analysis 103
prunes 59
purines 135
pyrolytic carbon 177

quality 550
quality assurance 523
quality control 523
quantitation 515

recrystallization 177
reference methods 135, 145
refractory metal alloys 177

representativeness 457
reproducibility 457
research in analytical chemistry 103
residues 63

sample preparation 445
sampling 59, 457
scanning electron microscopy (SEM) 255
scanning tunneling microscopy 427
secondary ion mass spectrometry (SIMS) 255, 415, 515
silicon 237
silicon spheres 405
soil extract 49
soil solution 49
solid phase chemistry 129
solid-state reactions 299
speciation 49
spectroscopic database 483
spectroscopy 483
stability 467
stationary phase 337
structure analysis 435
sugars 81
supercritical-fluid chromatography 337
surface plasmon 405
surface structure 427
synthetic organic materials 215

tandem mass spectrometry (MS/MS) 325
thallium 277
thermal analysis 391
thermomagnetometry 391
thin films 391
thin films metal/oxide/semiconductor (MOS) 309
time-of-flight secondary ion mass spectroscopy (ToF-SIMS) 237
topochemistry 177
trace elements 29, 49
trace metal determination 39
o-tyrosine 71

urban aerosols 13
urethane 59

vapor-particle partitioning 13
veterinary drugs 63
volatiles 71

weathering 255
working party on analytical chemistry/ federation of European chemical societies (WPAC/FECS) 555
works of art 245

X-ray absorption near edge structure (XANES) 435
X-ray photoelectron spectroscopy (XPS) 215, 237
